Zaheer Abdul

347-213-3626 | zaheertoday@gmail.com | Portfolio | GitHub | LinkedIn

Professional Summary

Results-driven Software Engineer with expertise in designing and developing scalable, high-performance applications. Proficient in **Java, Python, C, C++, and C#**, with experience in **cloud-native microservices, software development lifecycle, and test-driven development**. Adept at building **efficient APIs, optimizing system performance, and streamlining CI/CD pipelines** to enhance deployment efficiency. Skilled in working within **Agile environments**, collaborating with cross-functional teams to deliver high-quality solutions that improve operational efficiency and user experience. Recognized for **problem-solving, debugging, and optimizing complex systems** to ensure reliability and scalability. Passionate about leveraging modern technologies to drive innovation, enhance productivity, and continuously improve software development processes.

Technical Skills

- **Programming:** Java, Python, C, C++, C#, JSON, JavaScript, TypeScript, OOP, Data Structures, Algorithms, Design Patterns
- **Development:** Spring Boot, Spring MVC, Hibernate, REST APIs, GraphQL, Microservices, Node.js, Angular, React, JQuery, JSP, Servlets
- **Databases & Cloud:** Oracle, Cassandra, MySQL, MS SQL, MongoDB, AWS, Azure, Google Cloud, Kubernetes, Docker, CI/CD Pipelines
- **Tools & Security:** Git, GitHub, Bitbucket, Jenkins, Kafka, Agile, Scrum, Waterfall, TDD, Shell Scripting, Linux/Unix, JUnit, Swagger.
- **Professional Certifications :** AWS Certified Solution Architect, Microsoft Certified Azure Fundamentals

Education

- Master's in computer science, University of Maryland Baltimore County - **GPA: 3.7** **May 2024**
- Bachelor's in computer science, VR Siddhartha Engineering College - **GPA: 3.5** **Jul 2021**

Professional Work Experience

University of Maryland Baltimore County – Baltimore, USA (On-Site) | Software Engineer **Jan 2023 – Jan 2025**
Project: Cloud-Based Enterprise Application

- Engineered **scalable microservices** in **Spring Boot** with **AWS integration**, improving system resilience and reducing downtime by **30%**.
- Refactored legacy API endpoints into **GraphQL-based services**, cutting data retrieval overhead by **40%** and improving query response times.
- Configured **automated CI/CD pipelines** using **Jenkins and Docker**, accelerating deployment cycles and reducing release failures by **35%**.
- Conducted rigorous **security assessments**, integrating encryption and authentication layers that enhanced compliance and reduced vulnerabilities by **25%**.
- Led **cross-team collaboration**, coordinating with designers and QA engineers, ensuring on-time feature releases and improving sprint delivery efficiency by **20%**.

Cowan Systems LLC – Baltimore, USA (On-Site) | Full Stack Developer **May 2023 – Aug 2023**
Project: Web-Based Fleet Management System

- Built a **dynamic UI framework** using **React and Angular**, streamlining development and reducing frontend defects by **30%**.
- Rewrote **SQL-heavy operations** to leverage indexed queries in **PostgreSQL**, improving report generation speeds by **40%** and reducing server load.
- Deployed and monitored **containerized applications** using **Kubernetes**, achieving **99.9% system uptime** and optimizing auto-scaling.
- Developed **GraphQL resolvers** for frontend data aggregation, reducing API calls by **35%** and improving application response times.
- Assisted in **performance profiling**, identifying bottlenecks and reducing response times by **50%** through caching and optimized API routing.

Accenture Solutions Pvt Ltd. (Hybrid) | Software Development Engineer **Sep 2021 – Jun 2022**
Project: Enterprise Resource Planning (ERP) System

- Architected **multi-tier backend services** with **Spring MVC and Hibernate**, enhancing system modularity and reducing maintenance effort by **25%**.
- Automated **database migration scripts** in **Oracle and MS SQL**, cutting manual intervention by **40%** and accelerating deployment cycles.
- Configured **GitHub Actions for CI/CD**, integrating automated testing workflows that improved software reliability and reduced bugs by **30%**.
- Designed **role-based access control (RBAC)** for application security, preventing unauthorized access and reducing security incidents by **20%**.
- Spearheaded **root cause analysis (RCA)** for production incidents, implementing proactive monitoring that decreased downtime by **25%**.
